

Citrix, Gemalto and Wyse:

Secure Access Solutions for Healthcare Workers on the Move

Doctors, nurses, patients and support staff are constantly moving throughout large facilities to treat their patients. They must be able to access mission critical applications and confidential records quickly and securely in order to provide the highest level of patient care. In addition, HIPAA (Health Industry Portability and Accountability Act) and other healthcare regulations have created a universal mandate for secure access and regulatory compliance systems.

Healthcare workers typically log on to shared workstations to access patient data and applications as needed throughout the workday. To comply with government regulations and accounting requirements, their individual network access events, application usage and password changes must be audited on a routine basis. For IT organizations, this increases the cost and complexity involved in meeting the needs of their core constituency.

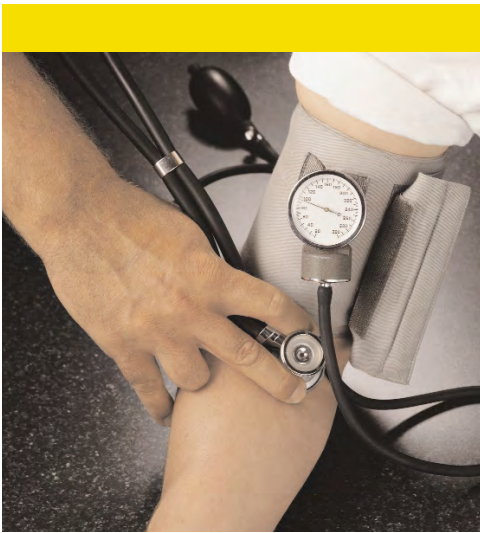

To address these needs, Citrix Systems, Gemalto and Wyse Technology have worked together to deliver an integrated thin client solution for healthcare organizations.

Solution Components

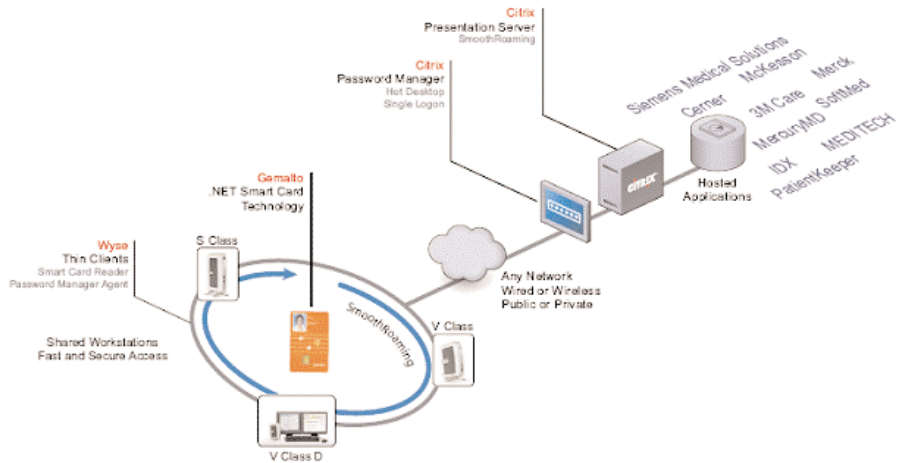

Citrix Password Manager™ and its Hot Desktop feature can safeguard shared workstations with required authentication and audit controls—while simplifying access. Citrix SmoothRoaming™ technology further enhances productivity by allowing users' sessions to move with them from one workstation to the next.

Gemalto .NET smart cards can be used with Citrix products to enhance the security and the credibility of audit trails with strong, two-factor authentication. Two factor authentication protects user identities by requiring users to log on with something they know—a unique PIN—and with something they have in their possession—the Gemalto .NET smart card.

Wyse Technology integrates both the Password Manager Agent and a smart card reader into its XPe thin clients to swiftly and securely deliver the benefits of Hot Desktop and Gemalto smart card technology to healthcare workers everywhere and their patients.

Architecture

Solution Benefits

- Deliver secure workstation and application access in seconds.
- Enforce unique logons with a Gemalto .NET smart card badge and Wyse thin client with built-in smart card reader.
- Automate launching and logons to applications.
- Present the same application screen from the previous workstation.
- Prevent walk-away security breaches.
- Prevent workstation denial of service.
- Audit shared workstation access events.

Leveraging technology from Gemalto and WYSE, Citrix Hot Desktop and SmoothRoaming provides the best in secure and rapid access technology for the highest level of patient care.

About Gemalto: Combining their strengths of market and technology leadership, Axalto and Gemplus merged to form Gemalto, the leader in making personal digital interactions secure and easy. Gemalto provides you with the security to be free: to authenticate online without the loss of identity; to pay securely from anywhere, while avoiding the risk of fraud; to communicate, access and share content via mobile devices with greater confidence; and to identify yourself for access to transportation, buildings and corporate networks—so we can live and work with security and freedom. For more information, visit <http://www.gemalto.com>.

About Citrix: Citrix Systems, Inc. (Nasdaq:CTXS) is the global leader in access infrastructure and the most trusted name in secure access. More than 180,000 organizations around the world use the Citrix Access Platform to provide secure, well-managed access to business information wherever it lives—on demand. Citrix customers include 100 percent of the Fortune 100 companies, 99 percent of the Fortune 500, and 97 percent of the Fortune Global 500, as well as hundreds of thousands of smaller businesses and individuals. Based in Fort Lauderdale, Florida, Citrix has offices in 22 countries and approximately 6,200 channel and alliance partners in more than 100 countries. For more information, visit <http://www.citrix.com>.

About Wyse Technology: Wyse Technology is the global leader in thin computing. Wyse and its partners deliver the hardware, infrastructure software, and services that comprise thin computing, allowing people to access the information they need using the applications they want, but with better security, manageability, and at a much lower total cost of ownership than a PC. Thin computing allows CIOs and senior IT professionals to reduce costs, manage risk, and deliver access to information. Wyse partners closely with industry leaders Microsoft, Citrix, VMware, and others to achieve this objective, and is a Citrix Ready partner. Wyse is headquartered in San Jose, California, with offices worldwide. For more information, visit the Wyse website at <http://www.wyse.com>
